1 **Introduction**

2 Oracle Corporation proposes to acquire PeopleSoft, Inc. through a hostile cash tender offer
3 valued at \$7.7 billion. If Oracle is not stopped, head-to-head competition between these two
4 companies for procurements will vanish, leaving two dominant firms offering the high-function Human
5 Resources Management (“HRM”) and Financial Management Services (“FMS”) functionality needed
6 by this nation’s most complex, global enterprises. Enterprise customers, who currently rely on the
7 rivalry between Oracle and PeopleSoft to provide innovative products at competitive prices, will be left
8 with a dramatically altered competitive landscape. Most customers will be left with two choices from
9 which they can purchase mission critical software.

10 Objective observers in the marketplace, including even Oracle before it launched its hostile
11 takeover attempt, recognize that there is a category of enterprise software that is produced only by
12 Oracle, PeopleSoft or SAP AG (“SAP”).¹ Plaintiffs will call major customer witnesses to explain that
13 because of the business realities of the HRM and FMS markets, the transaction would substantially
14 reduce competition. Plaintiffs will also present testimony from the consultants who aid these customers
15 in the procurement process ratifying these customer views. Substantial corroborating evidence of the
16 takeover’s likely anticompetitive effects will be presented from Oracle documents and executives’
17 deposition testimony. Finally, Plaintiffs will introduce expert testimony that will provide the Court with
18 an economic and technical framework to evaluate the factual testimony that the Court will hear.

19 Oracle’s rebuttal arguments fail. Neither entry by mid-market software companies nor new
20 firms will overcome the substantial anti-competitive effects this transaction would likely produce. In
21 addition, Defendant’s alleged efficiencies are unsubstantiated and are best understood as part and
22 parcel of an anticompetitive reduction in output. When the evidence is in, the likely anti-competitive
23 effects of the proposed acquisition will be readily apparent.

24 For these reasons, the transaction violates Section 7 of the Clayton Act, 15 U.S.C. § 18. To
25 prevent this substantial threat to competition, the United States and the Plaintiff States seeks injunctive
26 relief under Fed. R. Civ. P. 65 and, respectively, 15 U.S.C. § 25 and 15 U.S.C. § 26.

27
28

¹ Plaintiffs have elected to give this software the short-name of high-function HRM and FMS software for purposes of delineating relevant product markets in this case.

1 **I. The Defendant and the Target Company**

2 **A. Oracle**

3 Oracle Corporation, headquartered in Redwood Shores, California, is the second largest
4 software company in the world with more than 40,000 employees, software sales in over 87 countries,
5 and almost \$9.5 billion in revenues in fiscal year 2003. Oracle is also the world's third-largest vendor
6 of Enterprise Software Applications ("ESAs") including high-function HRM and FMS software,
7 generating \$ in licensing revenue and \$ in maintenance revenue in FY2003.

8 **B. PeopleSoft**

9 PeopleSoft, headquartered in Pleasanton, California, is the second-largest vendor of ESAs,
10 including high-function HRM and FMS software, generating \$ in licensing revenue and \$
11 in maintenance revenue in FY2003. PeopleSoft acquired J.D. Edwards in 2003. Prior to the
12 merger, J.D. Edwards, a provider of mid-market software, had abandoned an attempt to sell high-
13 function ESAs.

14 **II. The Transaction**

15 On June 6, 2003, Oracle made an unsolicited \$16.00 per share cash tender offer for all
16 outstanding shares of PeopleSoft. On or about June 18, 2003, Oracle increased the offer to \$19.50
17 per share, and on or about February 4, 2004, to \$26.00 per share. Oracle reduced the offer on May
18 14, 2004, to \$21.00 per share, which values the acquisition at approximately \$7.7 billion. The merger
19 would combine the second and third-largest of the three vendors of high-function HRM and FMS
20 software.

21 For Oracle, this transaction is a no-lose proposition. Oracle seeks to acquire market share and
22 an ongoing revenue stream without competing for it, while concurrently decimating its chief competitor.
23 Oracle effectively plans to shut down sales of PeopleSoft products by no longer marketing to new
24 customers and to end development of major upgrades to PeopleSoft products, reducing consumer
25 choice in the market place. In addition, the transaction will eliminate Oracle's closest competitor for not
26 only installed-base customers, but also for new license sales, allowing Oracle to raise license and
27 maintenance fees. But even if the transaction is stopped, the effect of Oracle's prolonged and
28 unwelcome assault on PeopleSoft will be to slow PeopleSoft's growth, to the primary benefit of
Oracle.

1 **III. The Products and Industry Background**

2 **A. Background**

3 Enterprise Software Applications provide the tools necessary to automate key business
4 processes. ESAs enable more efficient management of the most basic functions of any organization.
5 Major corporations and other institutions use ESAs to run and monitor their daily operations.

6 Organizations use four “pillars” of ESAs. Organizations manage employees through HRM
7 applications, including payroll planning, recruiting, training, and benefits administration. Organizations
8 maintain financial records through FMS applications, including general ledger, accounts payable,
9 accounts receivable, and asset management. Organizations track inventory through supply-chain
10 management (“SCM”) applications, including modules to control inventory and manage manufacturing
11 and distribution. Organizations maintain customer relationships through customer relationship
12 management (“CRM”) applications, including modules to manage the entire life-cycle of a sale, from
13 customer prospects, through marketing, to customer service and support.

14 Within each of these pillars a variety of software modules provide various functions.
15 PeopleSoft, for example, has 70 modules within its HRM pillar and 30 to 40 modules each within its
16 FMS, SCM, and CRM pillars. A customer can license all modules available in the pillar or, as is more
17 common, only those it needs.

18 ESAs may be combined into an enterprise resource processing suite (“ERP”), which usually
19 consists of two or more pillars. This often provides a customer with easier implementation and
20 significant cost savings. Customers need not purchase all four pillars when licensing these ERP suites.

21 **B. ERP Products: High-Function and Mid-market Compared**

22 Oracle’s proposed acquisition of PeopleSoft combines two of only three firms that develop and
23 distribute “high-function” HRM and FMS software. The HRM and FMS enterprise software products
24 developed by Oracle, PeopleSoft and SAP are in a different class from mid-market software products
25 even though both perform some of the same functions (e.g., general ledger). This distinction is well
26 recognized throughout the enterprise software business, as Plaintiffs will show through the testimony of
27 customer, industry analyst, and expert witnesses and documents.

28 Plaintiffs’ expert Professor Marco Iansiti is expected to testify about the principal
characteristics that distinguish high function software from other “mid-market” or “out of the box”

1 products. The principle differences are:

2 *Deep functionality:* High-function HRM and FMS support multiple currencies, multiple
3 languages and multiple legal and business units within a single enterprise. The software's
4 functional complexity increases as the customer's degree of geographical dispersion increases:
5 companies with multiple U.S. or international facilities must have deep HRM functionality to
6 comply with local tax and employment laws; must be localized in the language of each country;
7 have currency conversion functionality; and must conform to the constantly changing reporting
8 requirements and regulations in effect in each country and sub-jurisdiction. In addition, high-
9 function software generally covers a broader range of functionality than mid-market solutions.
10 So, for example, in addition to the basic HRM functionality payroll and benefits, high-function
11 software may offer modules to support succession planning, training, recruiting, and employee
12 expertise tracking. In general, the mid-market products do not have comparable functional
13 depth to Oracle, SAP and PeopleSoft.

14 *Highly scalable:* High-function software can support simultaneous use by thousands of users
15 and dependably support thousands or tens of thousands of simultaneous transactions with a
16 single "installation" of the software. The software must also demonstrate the ability to "scale
17 up" to accommodate a business that grows in size and complexity through acquisition or internal
18 growth.

19 *Highly integrated:* High-function software products allow data from disparate business units or
20 legal entities to be integrated or "rolled up" across the entire enterprise, providing an
21 organization's officers with a view of the enterprise to aid in analysis and decision making.
22 Mid-market software does not provide the same broad level of integration across the breadth
23 of functionality of high-function software.

24 *Highly configurable and flexible:* High-function software can be adapted to fit the customer's
25 business processes through configuration (setting of options that come included in the software,
26 sometimes called "flipping of switches") instead of "customization," which refers to writing
27 unique software code. Mid-market software tends to have preset configurations, and as a
28 result is generally not as adaptable to the customer's needs. A typical purchaser of mid-market
software will modify its business processes and functions to fit within the capability of the

1 software instead of configuring or customizing the software to fit its existing business process.
2 Each of the three high-function software vendors, Oracle, PeopleSoft and SAP, offers, or is
3 working towards offering, pre-configured software for the U.S. mid-market, as each recognizes
4 demand for such separate products.

5 *Credible vendors:* High-function software is distinguished by the firms that develop and
6 distribute it. To develop and sell high-function FMS and HRM software, a firm must have
7 substantial “vendor credibility,” which requires an annual investment of hundreds of millions of
8 dollars in research and development in order to maintain, upgrade and improve the products,
9 and a proven track record in supplying enterprise software solutions to “peer” organizations.
10 Each of the sellers of high-function software also maintains a dedicated direct sales force to
11 learn about the customer’s requirements and provide the expertise necessary to support sales of
12 these high-function products.

13 **C. The Sales Process**

14 Buying high-function ESAs is a lengthy, costly, and complex process. Although each sales
15 cycle is somewhat different, Oracle has identified nine steps customers generally follow in the
16 procurement process: (1) ; (2) ; (3)
17 ; (4) ; (5)
18 ; (6) ; (7) ; (8)
19 ; (9) .² Not all customers follow each of these
20 steps, but it is a generally reliable overview for how the process works.

21 During the procurement process’s initial stages, the customer may turn to industry analysts who
22 produce reports, studies, consumer surveys, data on vendor R&D, vendor recommendations, and
23 benchmark studies that estimate the total cost of ownership.³ Due to the complexity of the software
24 and the high-risk nature of an enterprise software decision, customers often hire a “Big Five” consulting
25 firm⁴ to assist in evaluating, selecting, implementing, and upgrading high-function software.

26
27 ² Ciandrini CID Dep. 81:22-83:16 (discussing CID exhibit 4).

28 ³ The industry analysts include AMR Research, Gartner Group, Giga Information Group, IDC,
and Meta Group.

⁴The “Big Five” are Accenture, BearingPoint, Cap Gemini, Deloitte Consulting, and IBM.

1 Once a customer has decided to license an enterprise software solution, the customer will
2 perform a ROI calculation and establish whether it has the budget to invest in an enterprise solution.
3 Vendors like Oracle and PeopleSoft will not engage in the lengthy and costly procurement process
4 without some assurance that the customer will be able to commit the substantial resources required to
5 license, implement, and manage the software. At this point, many customers send vendors RFIs to
6 determine whether their software products can meet the customer's specific needs. Thereafter, the
7 customer sends out requests for proposals to certain vendors. The RFPs are highly specific, can run
8 over one hundred pages, and in some cases call for a vendor's capabilities on over hundreds of specific
9 business requirements.

10 The customer and its consultants evaluate the responses and invite qualifying vendors for a
11 demonstration. In a typical sales cycle the decision to exclude certain vendors from presenting a
12 demonstration is based on performance, not price. Therefore, vendors not invited to a demo based on
13 their perceived lack of functional performance have little, if any, price constraining influence on the
14 vendors invited to present demonstrations.

15 Customers and their consultants test and evaluate the software during the vendor
16 demonstrations. Each demonstration may last several days, providing the customer time to score each
17 product's ease of use, performance, graphical interface, and reporting capabilities. Based on this
18 information, vendors can assess which other rivals' products can credibly meet the customer's needs
19 and refine their estimate of their chances of winning a particular contract. The vendors incorporate this
20 knowledge into their bidding behavior. Vendors that lack functionality do not have a price constraining
21 affect because the customer has already informed the vendors of its needs during the RFP and
22 demonstration stages, and vendors know which other vendors' particular products satisfy those needs.

23 **D. The Total Cost of Ownership, and the License Fee**

24 High-function HRM or FMS software generally costs the customer millions of dollars to license,
25 implement, maintain, and keep current. The total cost of ownership ("TCO") associated with
26 implementing ESAs includes: (1) application licensing fees; (2) new hardware costs; (3) costs to install,
27 configure, and customize the software; (4) training costs; (5) maintenance service and update fees; and
28 (6) internal staff costs. Although license and maintenance fees for the applications are a small portion of
an ESA system's TCO – 20 percent is typical – vendors compete on license fees and other terms

1 during the final round of negotiations. The maintenance contracts generally include software updates
2 and worldwide 24-hour support. The fee for the annual maintenance contract is usually a set
3 percentage of the license fee, and Oracle charges percent of the initial license fee for
4 maintenance for its ESAs.⁵ Therefore, the license fee affects customers' ongoing maintenance support
5 costs.

6 **E. ESAs are Mission Critical Software Applications Chosen by Risk Averse CIOs**

7 Because high-function HRM and FMS applications are mission critical, customers are highly
8 risk averse when it comes to ESA selection and implementation. These enterprises do not want to
9 invest in an unproven software package. Customers making purchase decisions rely heavily on a
10 vendor's history of successful installations in their same industry and with customers of similar size.

11 **IV. Legal Framework for Analyzing Transactions Under Section 7 of the Clayton Act**

12 Section 7 of the Clayton Act prohibits acquisitions that may substantially lessen competition. 15
13 U.S.C. § 18. The lawfulness of an acquisition turns on its potential to create or enhance market power
14 – the ability of one or more firms to raise prices above competitive levels for some significant period of
15 time. *United States v. Archer-Daniels-Midland Co.*, 866 F.2d 242, 246 (8th Cir. 1988), *cert.*
16 *denied*, 493 U.S. 809 (1989).

17 By proscribing transactions that “may” substantially lessen competition, Congress “indicate[d]
18 that its concern was with probabilities, not certainties.” *FTC v. Heinz Co.*, 246 F.3d 708, 713 (D.C.
19 Cir. 2001) (quoting *Brown Shoe Co. v. United States*, 370 U.S. 294, 323 (1962)). Section 7 does
20 not require proof that higher, anticompetitive prices will occur in the affected market. *Hospital Corp.*
21 *of America v. FTC*, 807 F.2d 1381, 1389 (7th Cir. 1986) (Posner, J). “All that is necessary is that
22 the merger create an appreciable danger of such consequences in the future. A predictive judgment,
23 necessarily probabilistic and judgmental rather than demonstrable is called for.” *Heinz*, 246 F.3d at
24 719 (quoting *Hospital Corp. of America*, 807 F.2d at 1389). “[D]oubts are to be resolved against
25 the transaction.” *FTC v. Elders Grain*, 868 F.2d 901, 906 (7th Cir. 1989) (Posner, J.) (citing
26 *Philadelphia Nat'l Bank*, 374 U.S. at 362-63).

27 Antitrust courts historically have evaluated the likelihood that a merger would create or enhance
28 market power through inference based on market structure. In conventional merger analysis: markets

⁵ Ellison CID Dep. at 75.

1 are defined, participants in the market are identified, shares are assigned, concentration is measured,
2 and anticompetitive effects are inferred. *See United States v. Marine Bancorp.*, 418 U.S. 602, 618-
3 23 (1974); *Philadelphia Nat'l Bank*, 374 U.S. at 363); *United States v. Baker Hughes Inc.*, 908
4 F.2d 981, 982-83 (D.C. Cir. 1990); *Olin Corporation v. FTC*, 986 F.2d 1295 (9th Cir. 1993); *FTC*
5 *v. Heinz*, 246 F.3d at 715. If the merger significantly increases concentration, the merger is presumed
6 illegal, and the burden of producing evidence shifts to the defendant to show why the increased
7 concentration is not indicative of anticompetitive effects. If the defendant produces sufficient evidence,
8 the burden shifts back to the plaintiff to produce additional evidence demonstrating that the merger will
9 produce anticompetitive effects. The plaintiff retains the ultimate burden of proof at all times. *Heinz*,
10 246 F.3d at 715; *Baker Hughes*, 908 F.2d at 983.

11 In merger analysis, the ultimate question is always about the creation or enhancement of market
12 power. Market definition and market shares are a means to understanding the market power analysis,
13 not an end in themselves, and as the Supreme Court reminds us, not a necessary predicate to antitrust
14 liability under Section 1 of the Sherman Act:

15 Since the purpose of the inquires into market definition and market power is to
16 determine whether an arrangement has the potential for genuine adverse effects on
17 competition, proof of actual detrimental effects, such as a reduction in output, can
obviate the need for an inquiry into market power, which is but a surrogate for
detrimental effects.

18 *FTC v. Indiana Federation of Dentists*, 476 U.S. 447, 460-461 (1986); *accord Ball Memorial*
19 *Hosp. v. Mutual Hosp. Ins., Inc.*, 784 F.2d 1325, 1336 (7th Cir. 1986) (“market share is just a way
20 of estimating market power, which is the ultimate consideration. When there are better ways to
21 estimate market power, the court should use them”). The 9th Circuit follows this view. *See, e.g.*,
22 *Rebel Oil Co. v. Atlantic Richfield Co.*, 51 F.3d 1421, 1434 (9th Cir.), *cert. denied*, 116 S. Ct. 515
23 (1995); *Forsyth v. Humana, Inc.*, 114 F.3d 1467, 1475 (9th Cir. 1997).

24 The rule should be no different under Section 7 of the Clayton Act. *Cf. United States v.*
25 *Rockford Mem'l Corp.*, 898 F.2d 1278 (7th Cir. 1990) (section 7 and section 1 standards converge
26 in merger cases). Because Section 7 deals with likely future effects of a transaction (“may substantially
27 lessen”), rather than with current effects of challenged conduct, it is often necessary to infer those
28 effects from market structure. Thus, courts define markets and measure shares to understand the
potential of a merger to create or enhance market power. When it is available, they may also examine

1 direct proof that a merger will likely result in higher prices to a significant number or group of
2 customers. Where, as here, the market structure analysis and direct evidence of competition both
3 indicate that the merger will increase prices and/or reduce quality, the two approaches each reinforce
4 the conclusion that the transaction violates Section 7.

5 Oracle’s proposed acquisition of PeopleSoft can be enjoined under either the direct or
6 inferential approach to finding market power.⁶ Plaintiffs will set out ample evidence of a relevant
7 market, and demonstrate that there are only three significant participants in the market. “Three to two”
8 mergers are generally condemned by the courts under the structural approach. *H.J. Heinz Co.*, 246
9 F.3d at 717 (D.C. Cir. 2001). But Plaintiffs will also offer direct evidence that the proposed acquisition
10 would likely harm consumers.

11 **V. Relevant Markets: High-function HRM and FMS Software Sold in the United States**

12 **A. Product Markets**

13 1. Legal Framework

14 The seminal Supreme Court cases define product markets by the “reasonable interchangeability
15 of use” or the “cross elasticity of demand” between the product itself and substitutes for it, *see Brown*
16 *Shoe Co. v. United States*, 370 U.S. 294, 325 (1962), which involves examining (1) the availability of
17 substitute products, and (2) the degree to which customers are willing to switch to those substitute
18 products. *United States v. E.I. duPont de Nemours & Co.*, 351 U.S. 377, 400 (1956). The Court
19 also teaches that the market “must be drawn narrowly to exclude any other product to which, within a
20 reasonable variation in price, only a limited number of buyers will turn.” *Times-Picayune Publishing*
21 *Co. v. United States*, 345 U.S. 594, 612 n.31 (1953). The central question is whether an increase in
22 price for one product would cause enough buyers to turn to other products so as to make the price
23 increase unprofitable.

24 The *Horizontal Merger Guidelines* have refined the assessment of potential switching in the

25 ⁶ Clayton Act § 7 is “a prophylactic measure, intended ‘primarily to arrest apprehended
26 consequences of intercorporate relationships before those relationships could work their evil’”
27 *Brunswick Corp. v. Pueblo Bowl-O-Mat, Inc.*, 429 U.S. 477, 485 (1977). The term “direct proof”
28 is used in Sherman Act cases to refer to harm that has already occurred, and can be observed by the
court without inferring market power from market shares. Here, of course, the harm cannot be literally
observed because it has not happened, and thus the term “direct” is intended as the category of proof
that does not rely on inferring market power through market shares.

1 face of a price increase. See U.S. Dept. of Justice & Federal Trade Commission, 1992 *Horizontal*
2 *Merger Guidelines* § 1.1 (rev. 1997) (“*Merger Guidelines*”). The Merger Guidelines set out the
3 hypothetical monopolist test: If there were only one seller of a product⁷ (or group of products), would
4 the monopolist exercise market power by significantly increasing price? If so, that product (or group of
5 products) constitutes a product market. The Ninth Circuit has adopted the reasoning and the market
6 power principle articulated in the *Merger Guidelines*. See, e.g., *Image Tech. Servs., Inc. v.*
7 *Eastman Kodak Co.*, 125 F.3d 1195, 1203-04 (9th Cir. 1997); *Rebel Oil Co., Inc. v. Atl. Richfield*
8 *Co.*, 51 F.3d 1421, 1434 (9th Cir. 1995); *Olin Corp. v. FTC*, 986 F.2d 1295, 1299–300 (9th Cir.
9 1993); *California v. Sutter Health Sys.*, 130 F. Supp. 2d 1109, 1120, 1128–32 (C.D. Cal. 2001).

10 Market definition should reflect market realities. *Metro Mobile CTS, Inc. v. NewVector*
11 *Communications, Inc.*, 892 F.2d 62, 63 (9th Cir. 1989). Courts look to customers’ perceptions of
12 the marketplace, the existence of special classes of customers who desire particular products and
13 services, and the defendants’ documents reflecting the “business reality” of “how the market is
14 perceived by those who strive to profit in it,” *FTC v. Coca-Cola Co.*, 641 F.Supp. 1128, 1132
15 (D.D.C. 1986), *vacated as moot*, 829 F.2d 191 (D.C. Cir. 1987), and industry or public perception
16 of separate markets. See *United States v. Grinnell Corp.*, 384 U.S. 563 (1966); *Brown Shoe*, 370
17 U.S. at 325, *Olin*, 986 F.2d at 1299, 1302-03; *Rothery Storage & Van Co., v. Atlas Van Lines*,
18 792 F.2d 210, 218 n.4 (D.C. Cir. 1986) (“industry or public recognition of the [market] as a separate
19 economic unit matters because we assume that economic actors usually have accurate perceptions of
20 economic realities”); *Merger Guidelines* § 1.11. Finally, the market definition need not be perfect, as
21 it is “always possible to take potshots,” at a market definition, *Rockford Memorial*, 898 F.2d at 1285;
22 the definition exercise should assist the Court in understanding competitive effects, and need not be
23 measured by “metes and bounds.” See *Tampa Elec. Co. v. Nashville Coal Co.*, 365 U.S. 320, 332
24 (1961), *citing Times-Picayune Pub. Co. v. United States*, 345 U.S. 594, 611, 73 (1953).

25 The markets at issue in this case, as alleged in Plaintiffs’ Complaint, are traditional product
26 markets based on product characteristics, not price discrimination markets based on customer
27 characteristics. Compare *Merger Guidelines* § 1.11 with §1.12. The prevalence of price

28 ⁷ The Merger Guidelines discuss a hypothetical monopolist, but a hypothetical cartel serves the same analytical function: would exercising market power be profitable if there were no price competition over this product?

1 discrimination is important in understanding how competition functions in this industry, but does not
2 necessarily imply a market definition based on customer characteristics. *Cf. In re Brand Name*
3 *Prescription Drugs Antitrust Litigation*, 186 F.3d 781 (7th Cir. 1999) (discussing price
4 discrimination as it relates to market power). To be sure, a price discrimination market definition is
5 supported by Professor Elzinga, is legally permissible, *see, e.g., United States v. Eastman Kodak*
6 *Co.*, 63 F.3d 95 (2nd Cir. 1995) (rejecting price discrimination market on factual grounds), *Merger*
7 *Guidelines* § 1.12, and is amply supported by the factual record in this case. It is not, however, the
8 primary theory of market definition alleged by Plaintiffs.⁸

9 Put another way, markets defined by product characteristics may contain elements of price
10 discrimination and such markets do not require uniform pricing to avoid the price discrimination label.
11 Indeed, the opposite result would be odd; very few markets are characterized by uniform pricing, and
12 very few antitrust cases describe price discrimination markets. We now explain how the hypothetical
13 monopolist or cartel would employ the price discrimination mechanism to exercise market power over
14 high-function HRM and FMS products.

15 2. Application of the Standards

16 The market definition should account for how markets actually function on a day to day basis,
17 or it would have little utility for its intended purpose: elucidating the competitive effects analysis. In
18 high-function HRM and FMS software markets, the sales process tells the story. As explained above,
19 and as witnesses will testify at trial, the industry practice is to purchase high-function software through a
20 lengthy and detailed sales process, which *by its nature* generates information sufficient for price
21 discrimination by the vendors. The uncontroverted fact is that all customers reveal a significant amount
22 of detail about their functional requirements, current software and hardware platforms, and business
23 processes. It is in the customers' interest to do so because the vendors need this information to show
24 how their products are the best functional fit for the business process the software will automate.
25 Vendors know the functional capabilities of their competitors, and can therefore identify their likely

26 ⁸ Price discrimination markets would be permissible in this case, and using that approach would
27 not affect the outcome of the analysis. Typical price discrimination markets consist of customers buying
28 the same physical product as all other customers, but may be charged a higher price because they have
less propensity to substitute to other products and can be segregated from the larger group. To sustain
a price discrimination market, it is essential that arbitrage would not defeat the differential pricing
scheme. *Merger Guidelines* § 1.12.

1 competition for the upcoming bid. If a customer has complex functional requirements both the
2 customer and the vendors will know that the customer's best alternatives will be Oracle, PeopleSoft
3 and SAP, and in some instances fewer than all three firms.

4 The price competition generally starts after the qualified vendors are selected by functional fit
5 with the customer's needs. By the time a vendor is required to offer a final price, it usually has
6 substantial knowledge about its value to the customer and the capabilities of rivals in setting its price.
7 As Oracle's documents make clear, Oracle's prices are driven by the competition *for the particular*
8 *bid*, and how intensely the customer prefers each vendor's product. Arbitrage is impossible, because
9 the software product as implemented in that customer's systems cannot be resold. In addition, the
10 software license cannot be resold or sublicensed without the vendor's permission.

11 The price discrimination mechanism helps to explain why a hypothetical monopolist or cartel
12 would significantly raise the price of high-function HRM and FMS software. In some markets, the
13 existence of some customers that could readily switch to other products protects all customers from
14 exercises of market power, because attempts to raise prices to just a subset of the customers would be
15 defeated by arbitrage. In high-function software markets, however, customers that might readily switch
16 to other products – for example customers with functional requirements that would make them
17 indifferent between Lawson and Oracle – would not be subject to a price increase, but neither would
18 such customers affect the price the hypothetical monopolist would charge the vulnerable customers.
19 Through price discrimination, the hypothetical monopolist would raise prices of the high-function
20 products, but not to all uniformly, and not to all customers.

21 a. A Hypothetical Cartel of Oracle, PeopleSoft and SAP Selling High-
22 function HRM and FMS Products Would be Successful

23 1. Oracle's Own Business Documents Show that PeopleSoft and
24 SAP are its Closest Competitors, and Primary Pricing
Constraints

25 Oracle's Discount Approval Forms ("DAFs") show unequivocally that Oracle, PeopleSoft and
26 SAP are each other's primary competition for high-function bidding opportunities. Professor Elzinga
27 will testify that he has reviewed and analyzed the DAFs, which are generated by the Oracle sales force
28 when seeking permission to discount the price of the product at issue. The DAF identifies the name of
the customer, the discount being requested, and the justification for the request. Smaller discounts may
be approved by sales managers, while the largest discounts must be approved at the highest executive

1 levels of the company.

2 The DAFs clearly show that Oracle views its primary pricing constraint as PeopleSoft, followed
3 by SAP. To reject the government's product market, Oracle must argue that this reality would be no
4 different if the current price constraint from PeopleSoft and SAP were to disappear – that Lawson,
5 legacy systems, the “do nothing” option and the various also-rans have the functionality to equally keep
6 prices in check. In Professor Elzinga's analysis, Oracle's DAFs identified over opportunities in the
7 time frame under study, and competition with PeopleSoft and SAP was mentioned as a justification for
8 the deepest level of discount times, while the next most frequent justification, , is mentioned
9 times. The reason Oracle discounts so frequently against PeopleSoft and SAP, and not against other
10 firms, is because Oracle's products are functionally more like SAP and PeopleSoft's products than
11 they are like mid-market products. For this reason, Oracle could successfully form a cartel with
12 PeopleSoft and SAP, and the cartel would not be rendered ineffective by competition from other
13 vendors.⁹

14 2. The Big 5 Testimony Will Confirm the Market Definition

15 The decision to purchase and implement ERP software is so costly, and the risk of a failed
16 implementation is so enormous, that many potential customers turn to the “Big 5” consulting firms for
17 advice on matching potential vendors' capabilities and their business automation needs. Plaintiffs will
18 present testimony at trial from Nancy Thomas of IBM, Perry Keating of BearingPoint, and Lynne
19 Anderson of Gap Gemini Ernst & Young to discuss their firms' software selection and implementation
20 services, how the ERP selection process works, and how vendors fit the functional needs and
21 requirements of their clients. In addition, David Dortenzo of Deloitte Consulting testified by deposition,
22 and Christy Bass of Accenture appears on Oracle's witness list. All representatives of the Big 5 firms
23 confirm that Oracle, PeopleSoft, and SAP offer products in FMS and HRM that are scalable, proven,
24 multinational, and multi-currency, setting them apart from all other vendors, including Lawson, AMS
25 and Microsoft.

26 3. Outsourcers use Oracle, PeopleSoft or SAP as their HR
27 Platforms for Clients Which Demand Global Functionality

28 ⁹ Professor Preston McAfee, Plaintiffs' primary expert on competitive effects, will also rely on
the DAFs, and will also testify that the information that becomes available during the sales process
allows Oracle to price discriminate.

1 Business Process Outsourcers, such as ADP and Fidelity Employer Services, offer services
2 that automate HRM business functions. These outsourcers use SAP, PeopleSoft, and Oracle as their
3 software platforms, and can therefore be viewed as value-added resellers of high-function software.
4 Since the outsourcers require SAP, PeopleSoft or Oracle software to service their clients with high-
5 function requirements, they are not in a position to undercut a price increase by the hypothetical
6 monopolist of high-function HRM software.

7 ADP, thought to be the leading outsourcer, recently announced that it licensed SAP's HR
8 software for use as the platform for its worldwide service.¹⁰ Although ADP offers payroll and HR
9 services in several countries around the world,

10 . In order to compete worldwide,
11 ADP sought

12 .¹¹

13 .¹²

14 The decision to outsource instead of license software is generally considered a fundamental
15 question of how a business operates, rather than as a competitive option that serves as a pricing
16 constraint at the end of a software sales cycle. As Mr. Ellison testified, “

17
18
19
20
21 ¹⁰ Fidelity Employee Services Company (sometimes referred to as “FESCO”) is in a similar
22 posture. Fidelity offers outsourcing services, and has landed

23
24
25
26 ¹¹ Zena Brand Dep. 40:16-41:11.

27 ¹²

28 Currently, for the U.S. that is based on PeopleSoft source code,
which ADP has modified to fit its service model. Enterprise HR is a US-only product, and has no
global functionality. US clients can purchase ADP services elsewhere in the world, but those services
lack high-function attributes.

2 b. Mid-Market Software is not a Substitute for High-Function Software
 3 Customers that require high-function HRM and FMS software will not switch to mid-market
 4 software to avoid a price increase. Oracle appears to be arguing that mid-market software vendors,
 5 including Lawson, SSA/Baan, Microsoft, and AMS can discipline Oracle’s prices on its high-function
 6 software. These mid-market vendors, however, offer basic HRM and FMS functionality that is not
 7 designed to handle large data sets, large numbers of transactions and concurrent users, and multiple
 8 languages and currencies. Customers of high-function software need its superior functionality, and for
 9 them mid-market software is not an acceptable option.

10 **B. The Relevant Geographic Market Is the United States**

11 The geographic market is the United States. This geographic market is supported by the facts
 12 and law as applied to this case because it is large enough to capture all sellers of the relevant products
 13 (*i.e.*, Oracle, PeopleSoft, and SAP), such that a hypothetical cartel consisting of the products of those
 14 firms could profitably raise prices above a competitive level without being constrained by sellers outside
 15 the United States. Defendant contends that the relevant geographic market encompasses at least the
 16 United States and Europe, because SAP is a German firm. However, that proposed market definition
 17 ignores market facts and, moreover, it does not rebut Plaintiffs’ showing that the merger is likely to
 18 cause higher prices and other anticompetitive effects in the United States.

19 Under the Merger Guidelines, a “relevant geographic market” is defined using the same
 20 “hypothetical monopolist or cartel” test used to define a relevant product market. The smallest
 21 geographic area in which the hypothetical monopolist could raise prices constitutes a relevant
 22 geographic market. *Merger Guidelines*, § 1.21. *See also Rebel Oil*, 51 F.3d at 1434 (A “market” is
 23 any grouping of sales whose sellers, if unified by a monopolist or hypothetical cartel, would have market
 24 power in dealing with any group of buyers.”) (citing *Areeda & Hovenkamp*, Antitrust Law ¶518.1b at
 25 534).

26 The only effect of Defendant’s proposed market definition is to inflate SAP’s share of ERP
 27 sales relative to Oracle’s and PeopleSoft’s shares of such sales. However, this calculation
 28 underestimates the nature of competition among Oracle, PeopleSoft and SAP in the United States, as

¹³ Ellison CID Dep. 252:8-13.

1 evidenced by customer witnesses and Defendant's own documents. Moreover, it obscures the
2 competitive significance of head-to-head competition between Oracle and Peoplesoft. Oracle's
3 business records show that, in the United States, (1) Oracle competed against PeopleSoft more often
4 than any other competitor and (2) Oracle offered buyers its largest discounts when it competed against
5 PeopleSoft for the sale. Thus, Defendant's proposed market definition ignores market facts and should
6 be disregarded.

7 **VI. Anticompetitive Effects**

8 **A. Inference from Highly Concentrated Market Structure**

9 The proposed transaction is presumed illegal under Section 7 of the Clayton Act because the
10 combined entity would have a significant market share in a sufficiently concentrated market. *See*
11 *Philadelphia Nat'l Bank*, 374 U.S. at 363. "Statistics that indicate excessive post-merger market
12 share and market concentration create a presumption that the merger violates the Clayton Act." *State*
13 *of Cal. v. American Stores Co.*, 872 F.2d 837, 842 (9th Cir. 1989) *rev'd on other grounds*, 495
14 U.S. 271 (1990), *relevant part reinstated*, 930 F.2d 776, 777 (9th Cir. 1991); *see Baker Hughes*,
15 908 F.2d at 982 (D.C. Cir. 1990); *California v. Sutter Health System*, 130 F. Supp. 2d 1109, 1118
16 (N. Cal. 2001). In other words, the Plaintiffs establish a *prima facie* case of a § 7 violation by
17 demonstrating "that the merger would produce 'a firm controlling an undue percentage share of the
18 relevant market, and [would] result [] in a significant increase in the concentration of firms in that
19 market.'" *H.J. Heinz Co.*, 246 F.3d at 715 (quoting *Philadelphia Nat'l Bank*, 374 U.S. at 363)
20 (modifications in original).

21 Based on the structure of this industry alone, that is, a reduction from three firms to two for
22 most customers,¹⁴ the Plaintiffs are presumptively entitled to injunctive relief. Indeed, no court has
23 allowed such a merger, absent a strong argument that one of the companies is failing. According to the
24 D.C. Circuit Court of Appeals, "no court has ever approved a merger to duopoly under similar
25 circumstances." *H.J. Heinz Co.*, 246 F.3d at 717 (D.C. Cir. 2001).

26 ¹⁴ For certain industries where a specialized software vendor operates, such as the federal
27 government, some customers face a reduction in competition from four firms to three. Even a four to
28 three merger may substantially lessen competition. *See United States v. Rockford Memorial Corp.*,
717 F. Supp. 1251, 1280 & 1291-92 (N.D. Ill. 1989) (enjoining four to three merger), *aff'd* 898 F.2d
1278 (7th Cir. 1990).

1 A growing number of courts, including courts of this Circuit, apply the Merger Guidelines’
2 approach for assessing pre- and post-merger concentration through use of the Herfindahl-Hirschman
3 Index (“HHI”). See, *California. v. American Stores Co.*, 697 F. Supp. 1125, 1128-30 (C.D. Cal.
4 1988), *relevant part aff’d* 872 F.2d at 841-42; see also, e.g., *H.J. Heinz Co.*, 246 F.3d at 716;
5 *AlliedSignal, Inc. v. B.F. Goodrich Co.*, 183 F.3d 568, 574 (7th Cir. 1999). The HHI for a market
6 is calculated by summing the squares of the individual market shares of all firms participating in the
7 market. See *Merger Guidelines* § 1.5. When the HHIs are above 1800, and an acquisition would
8 result in an increase of more than 50 points in the HHI, the acquisition is presumed to be “likely to
9 create or enhance market power or facilitate its exercise.” *Merger Guidelines* § 1.51(c). “Sufficiently
10 large HHI figures establish [a] . . . *prima facie* case that a merger is anti-competitive.” *H.J. Heinz*
11 *Co.*, 246 F.3d at 716.

12 Oracle’s acquisition of PeopleSoft would produce concentration in the high-function FMS and
13 HRM software markets significantly above the *Merger Guidelines*’ threshold for presuming that the
14 transaction would substantially reduce competition. Plaintiffs, through their expert Professor Elzinga,
15 will present evidence of this at trial. The high-function FMS market HHI is and will rise by
16 points post-merger to , and the combined Oracle-PeopleSoft share will be %. The
17 high-function HRM market HHI is and will rise by points post-merger to , and the
18 combined Oracle-PeopleSoft share will be %.¹⁵ Both post-merger markets would be highly
19 concentrated and experience large increases in concentration, with the combined firm controlling an
20 undue share of the markets at issue.

21 **B. Unilateral Effects**

22 1. Past as Prologue – Real World Evidence Showing How Consumers Will be
23 Harmed by This Transaction

24 Customer testimony, along with Oracle’s business documents and other evidence, colorfully
25 illustrates how head-to-head competition with PeopleSoft has benefitted consumers, and shows how

26 ¹⁵ Professor Elzinga analyzed data produced by Oracle, PeopleSoft and other software vendors
27 during the course of the merger investigation before the Antitrust Division. Elzinga measured market
28 shares of license sales of at least \$500,000. This size-of-deal proxy was intended to screen out mid-
market software sales, but did not screen perfectly, and the market share data contains some sales that
are not in the relevant market. For example, Microsoft’s license sale to was included, but as
Microsoft will explain at trial, that software lacks the functionality to meet the market definition.

1 the removal of PeopleSoft from the market will harm competition. This evidence shows that (1) bidding
2 competition lowers prices to consumers; and (2) bidding strategy is affected by the fit between the
3 customer's needs and the functional offering of the vendor. There will be numerous examples
4 throughout the record; here are just two.

5 a. Greyhound

6 Mary Glover, Greyhound Lines, Inc.'s Vice President for IT Services, will testify at trial about
7 a recent bidding competition between Oracle and PeopleSoft. Greyhound is a large intercity bus
8 transportation company, with revenues of over \$1 billion per year. Greyhound serves more than 3,700
9 destinations in the U.S. and Canada and employs approximately 15,000 people.

Oracle will argue that prices are influenced by a host of factors beyond its control,²⁰ but competition is the final determinant of price, and, in the relevant markets, Oracle's greatest source of competition is PeopleSoft.

2. Differentiated Products and Next Best Substitutes

As Oracle's "Discount Approval Forms" and other documentation confirm, Oracle and PeopleSoft are often each other's closest competition in the relevant markets, but their products are not perfect substitutes for each other. In economic terms, they are *differentiated*. Each firm offers high-function software with, for example, different modules, different user interfaces, different ability to interact with database software applications and different industry expertise. When products are differentiated, so that offerings of different market participants are imperfect substitutes, competition may be localized. See Carl Shapiro, *Mergers with Differentiated Products*, 10 *Antitrust* 23 (Spring 1996). In this situation sellers will compete more directly with those rivals who sell closer substitutes. See *FTC v. Libbey*, 211 F. Supp. 2d 34 (D.D.C. 2002) (approving preliminary injunction when the merging firms were each others closest substitutes in the restaurant glassware supply market); *FTC v. Staples, Inc.* 970 F. Supp. 1066, 1075-80 (D.D.C. 1997) (finding sub-market of office-supply superstores within a broader market that consisted of ordinary office supplies; condemning three to two merger among office-supply superstores). A merger between firms selling products that are relatively close substitutes may diminish competition by enabling the merged firm to profitably raise prices above

¹⁹ *Id.* at 202:7-15.

²⁰ One such factor is the customer's option to delay purchase, by remaining longer on a legacy system. As Professors Elzinga and McAfee will explain at trial, this option does not currently pose a significant constraint on Oracle's pricing.

1 pre-merger levels.²¹ In pre-merger competition between Oracle and PeopleSoft, some of the sales lost
2 due to a rise in the price of one of the merging firms' products would be diverted to the other merging
3 firm's product. A combined Oracle/PeopleSoft enables the merged firm to recapture these sales within
4 the merged entity, thus rendering profitable a price increase that would not have been profitable pre-
5 merger.²²

6 This concern is increased here because Oracle, PeopleSoft, and SAP are the only providers
7 that compete in the procurement process for high-function software. As the Discount Approval Forms
8 demonstrate, customers often consider Oracle and PeopleSoft the top two competitors in head-to-head
9 bidding competition. This head-to-head competition at the end of the procurement process, after other
10 competitors have been excluded by the customer, results in substantial price competition as Oracle and
11 PeopleSoft attempt to out-bid one another. A merged Oracle/PeopleSoft would need to outbid only
12 the third closest rival, SAP, for these particular licenses.²³ See *H.J. Heinz*, 246 F.3d at 718-19
13 (enjoining merger, in part, when it would eliminate competition between only two firms competing for
14 second position grocery store baby foods slots). The customer, instead of paying the price that just
15 outbids the second best-bidder, will now be forced to pay the price that just out-bids the third best
16 bidder. See Jonathan B. Baker, *Unilateral Competitive Effects Theories in Merger Analysis*, 11
17 *Antitrust* 21, 22-23 (Spring 1997). A combined Oracle/PeopleSoft will be able to unilaterally raise
18 prices and substantially lessen competition.

19 3. Oracle's Acquisition Would Likely Result in Higher Prices

20 Professor McAfee will explain at trial that the merger would likely result in increased prices for
21 high-function HRM and FMS software because competition from PeopleSoft currently poses a
22

23 ²¹ See *Staples*, 970 F. Supp. at 1083 ("The merger would eliminate significant head-to-head
24 competition between the two lowest cost and lowest priced firms in the superstore market. Thus, the
25 merger would result in the elimination of a particularly aggressive competitor in a highly concentrated
26 market, a factor which is certainly an important consideration when analyzing possible anti- competitive
effects.").

27 ²² Such a price increase will be profitable post-merger if rival sellers are unlikely to reposition
28 their product offerings so as to replace the loss in localized competition. For a further discussion see
Areeda, *Antitrust Law* ¶ 914a (rev'd ed. 1998).

²³ In the services and financial services industries, for example, SAP's product is not a
particularly good substitute for the PeopleSoft product.

1 substantial constraint on Oracle's pricing.

2 Oracle, PeopleSoft and SAP all set customer prices for high-function software according to a
3 "price calculator" or "price list" that specifies a list price based on a prospective customer's size and
4 purchasing volume. "[T]he list price is usually the starting point for the bargaining and the higher it is
5 (within reason) the higher the ultimately bargained price is likely to be." *In re High Fructose Corn*
6 *Syrup Antitrust Litigation*, 295 F.3d 651, 657 (7th Cir. 2002). Oracle, PeopleSoft and SAP set and
7 update their list prices interdependently, keeping tabs on one another's pricing structures and worrying
8 about deviations. Oracle, PeopleSoft and SAP also commonly offer discounts off list price as
9 competitive circumstances dictate. When competition requires a discount of more than around
10 percent, sales representatives must formally apply for executive approval of the discount. The most
11 direct evidence for head-to-head competition between Oracle and PeopleSoft is to be found in the
12 many Oracle discount approval forms which describe competition from PeopleSoft as the "Justification"
13 for the requested discount – the DAFs referenced earlier.

14 In addition to exploring a number of case studies that evidence the intensity of such head-to-
15 head competition, Professor McAfee undertook a broad empirical investigation of this competition
16 using regression analysis. He found that, across a wide range of procurement competitions involving
17 PeopleSoft, SAP and other companies, the presence of PeopleSoft as a competitor is associated with
18 an increase in Oracle's discount by a statistically and economically significant amount.

19 As Professor McAfee will explain at trial, Oracle offers a customer discount to avoid losing
20 sales. The DAFs confirm that the potential to lose sales to PeopleSoft is the most significant driver of
21 Oracle's discounting. The merger would relieve Oracle of its most significant and frequent competitive
22 threat, allowing Oracle to profitably scale back its discounting. Professor McAfee will explain that the
23 merger would broadly result in substantial price increases given the information that Oracle and SAP
24 have about customers and the differences in their high-function software products. Professor McAfee
25 will present a model of the merger of Oracle and PeopleSoft which captures salient features of
26 competition and is calibrated to market share data for HRM and FMS products provided by Professor
27 Elzinga. In this model, the merger of Oracle and PeopleSoft raises price by anywhere from five to
28 twenty-eight percent.

4. Arbitrage Will not Protect Consumers

1 Arbitrage is an economic and legal impossibility in this industry. The software licenses prohibit
2 resale of the product and, moreover, the installed applications are of no use to anyone but the intended
3 customer. Recognizing that actual arbitrage cannot affect the prices paid by consumers, Oracle's
4 experts will likely claim that consumers learn about discounts offered to others and can use this
5 information to negotiate similar deals, which will simulate the effect of economic arbitrage. This strained
6 analogy fails. A consumer's ability to strike a good deal depends on the breadth of alternatives to
7 which the consumer could turn; it is the threat of losing a sale to an attractive alternative that drives
8 Oracle's discounts. Learning that another consumer with broader alternatives has struck a better deal
9 is of little help to a consumer with fewer or less attractive alternatives.

10 **C. Harm to the Installed Base of Customers**

11 The potential for adverse unilateral effects is not limited to increases in initial license fees, but
12 also includes increases in ongoing maintenance and other related fees. Enterprises typically negotiate
13 long-term maintenance contracts when purchasing the initial license. Enterprises on maintenance
14 contracts receive ongoing software support, including bug patches and updates. The annual
15 maintenance fee is often pegged as a percentage of the enterprise's total license purchases from the
16 vendor. Thus, maintenance fees will be subject to adverse unilateral effects as well as license fees.

17 Competition to retain one's own base and to convert the installed base customers of rivals is an
18 important aspect of competition in the markets for high-function FMS and HRM software. Oracle's
19 marketing head Keith Block put the point succinctly: "

20 ."²⁴ Competition means Oracle and PeopleSoft each
21 know that they must keep quality high: provide their current customers good service; accurate, efficient
22 and timely updates; and useful enhancements. If not, they would (eventually) risk losing installed-base
23 customers and suffering in reputation that could hurt them in winning new customers. The merger would
24 end such competition between Oracle and PeopleSoft. As a consequence, installed-base, high-function
25 FMS and HRM customers would likely face higher maintenance fees, lower maintenance quality, or
26 both.

27 **VII. Oracle's Attempts to Rebut the Presumption of Anticompetitive Effects**

28

²⁴ E-mail from Keith Block dated October 19, 2003 with the subject line "
," ORCL-EDOC-00685563-4.

1 **A. Entry Is Not Likely to Prevent Anticompetitive Effects**

2 To demonstrate that the merger’s likely anticompetitive effects will be transitory, Oracle will
3 argue that new vendors will enter the high-function markets. *See* Areeda & Hovenkamp, Antitrust Law
4 ¶ 941b (Supp. 2004) (“The thrust of the low entry barrier claim is not that competition cannot be
5 ‘substantially lessened,’ but rather that a substantial lessening of competition will not produce as
6 substantial or as durable an effect as if entry barriers were higher.”); *cf. Olin Corp. v. FTC*, 986 F.2d
7 1295, 1305 (9th Cir. 1993) (placing entry barrier burden on company “to rebut a *prima facie* case of
8 illegality.”). The defendant must show that entry would be timely, likely, and of sufficient magnitude to
9 prevent a significant exercise of market power. *See Rebel Oil Co. v. Atlantic Richfield Co.*, 51 F.3d
10 1421, 1440-41 (9th Cir. 1995) (citing *Merger Guidelines*’ “timely, likely, and sufficient” test); *Olin*
11 *Corp.*, 986 F.2d at 1305 n.10. It is important to note that defendant’s burden is not simply to show
12 entry *could* happen – although the technical possibility alone is a huge challenge here – but that it likely
13 *would* happen, i.e., that it is both technically possible and economically sensible. *See FTC v. Cardinal*
14 *Health, Inc.*, 12 F. Supp. 2d 34, 56 (D.D.C. 1998) (“[E]ntry is to be considered ‘likely if it would be
15 profitable at premerger prices, and if such prices could be secured by the entrant.’”) (quoting *Merger*
16 *Guidelines* § 3.1).

17 In the high-function HRM and FMS software applications markets, it is unlikely that substantial
18 entry would undercut any post-merger price increase. None of the mid-market HRM and FMS
19 providers, best-of-breed providers, or niche providers with a specific industry focus would be likely to
20 enhance their product’s scalability, flexibility, and functionality, and secure the required customer
21 recommendations in a timely manner to prevent the combined Oracle/PeopleSoft from raising prices
22 above pre-merger levels. Any firm attempting to reposition into the high-function HRM or FMS
23 software market faces a formidable series of challenges to creating a high-quality product and then
24 becoming a credible participant at the product review stage of the procurement process.

25 There are several impediments to timely, likely, and sufficient entry. First, potential entrants
26 must overcome substantial complex technical obstacles impeding them from creating a high-quality
27 differentiated enterprise software suite. *United States v. United Tote*, 768 F. Supp. 1064, 1075-77
28 (D. Del. 1991) (finding technology a barrier where likely software entrants adapting mid-market
racetrack gambling software to large racetrack gambling software market needed 18 to 24 months to

1 re-tool their software product; customers demanded 100% reliability; and past attempted entrants
2 demonstrated repeated technological failures); Areeda & Hovenkamp, Antitrust Law ¶ 1128c4 (Supp.
3 2004) (“A firm is not likely to enter a market for which it lacks the capital, technical resources,
4 marketing channels, or skills.”). As discussed below, well financed potential entrants with sophisticated
5 software solutions in their own markets have repeatedly failed to gain a toe-hold in the high-function
6 HRM and FMS markets. Access to capital alone simply cannot create a working product in this
7 industry.

8 Second, any potential sufficient entry is many years away even under the best of circumstances.
9 The time needed to re-tool, expand, and debug a mid-market suite or best-of-breed application for the
10 high-function market would take several years. At trial, Mr. Bergquist will testify about PeopleSoft’s
11 entry into the FMS and CRM product space, which took many years to develop, beta-test, fix, gain
12 reference customers, and market to a broader customer base. This time frame exceeds both the
13 Merger Guidelines two-year test, and any time horizon examined by the courts. *See Syufy*, 903 F.3d
14 at 665 (analyzing post-merger entry at 13 months and 24 months); *FTC v. PPG Indus., Inc.*, 628 F.
15 Supp. 881, 885 (D.D.C. 1986) (finding high entry barriers when acquiring technical expertise delayed
16 entry for two- to six-years), *aff’d in part*, 798 F.2d 1500 (D.C. Cir. 1986); *Olin Corp.*, 113 F.T.C.
17 400 (1990) (finding high entry barrier when entry would take five- to ten-years), *aff’d*, 986 F.2d 1295;
18 *cf. In the Matter of Weyerhaeuser*, 106 F.T.C. 172, 287 (1985) (finding five-year time frame
19 untimely).

20 The Court will hear the testimony of Richard Allen, the former CFO of JD Edwards, a failed
21 entrant into high-function markets who will explain why even a seemingly well-positioned entrant could
22 not break into the “upmarket.” In addition, we discuss below prospects for entry by Microsoft,
23 Lawson and AMS. The evidence from these firms refutes Oracle’s argument that the threat of entry
24 will cure this anticompetitive transaction.

25 1. J.D. Edwards’ Failed Entry Attempt, Despite Hundreds of Millions of Dollars,
26 Years of Research & Development, and a Strong Mid-Market Product

27 Before being acquired by PeopleSoft in 2003, J.D. Edwards was the fourth largest provider of
28 ESAs in the world and was thought to offer the highest functioning mid-market product. J.D. Edwards
failed in their attempt to enter the “upmarket,” and since it was perhaps best positioned to offer a

1 competitive threat to Oracle, PeopleSoft and SAP, its failure is particularly instructive.

2 After investing hundreds of millions of dollars over several years, J.D. Edwards,
3 , ceased its attempts to enter the high-function market in 2001. J.D.
4 Edwards never secured the all too critical reference from an high-function customer needed to persuade
5 other high-function customers that J.D. Edward's new product satisfied their needs. The product
6 lacked

7 . Further, the
8 product was not sufficiently

9
10 . Finally, the system had

11
12 .²⁵ The technical barriers were simply too formidable for J.D. Edwards to overcome, despite
13 hundreds of millions of dollars in capital investments, hundreds of dedicated employees, and years of
14 research and development.

15 2. Microsoft Will Not Enter the Market

16 Microsoft has no plans to compete against Oracle in the relevant markets. Despite its
17 dominance in the desktop operating system market, it entered the ESA business only in 2001 with its
18 acquisition of Great Plains Software, and continued its expansion by acquiring Navision, a Danish
19 company, in 2002. Both of these companies sold mid-market software solutions aimed at general
20 business users. Microsoft, which tellingly uses SAP software for its own business needs, has remained
21 focused on the small and mid-market segments and has no plans to enter the large enterprise market.

22 Specifically, Microsoft has no intention to

23 Microsoft's products do not have high-function characteristics, including lacking some basic
24 functions such as inter-company trading, along with deficiencies in terms of performance, scalability,
25 and other areas. Microsoft believes it would take to try to improve its products to have
26 high-function characteristics, and even then those products

27 . Even if it could develop the code,
28 Microsoft would need to test the software in a real world environment, correct any bugs, and secure a

²⁵ See JDEC-01E-057715,

1 credible peer recommendation before selling the product.

2 Microsoft's current ESA development is called "Project Green." According to Microsoft,
3 Project Green products, will initially have

4
5 . Microsoft estimates that Project
6 Green will not be able to

7 Microsoft does not intend for Project Green to serve

8 3. Niche Vendors, Such as Lawson and AMS, Will Not Reposition to Compete
9 Outside Their Narrow Areas of Expertise

10 Lawson offers both HRM and FMS mid-market software focused on three industries
11 (sometimes referred to as "verticals"): retail, health care, and public sector (state and local
12 government). Oracle views Lawson as a

13 .²⁶ PeopleSoft
14 believes that Lawson has

15 .²⁷

16

17

18

19

20

21 The industries where Lawson competes most effectively do not often require HRM or FMS

22 software with the most highly complex functional features (*i.e.* multiple lines of business or multinational

23

24 ²⁶ Ellison CID Dep. at 196:18-197:7.

25 ²⁷ See , PowerPoint presentation,

26

27

28

1 locations) that are at the core of the Plaintiffs' relevant markets. Mr. Ellison

2
3 .²⁸

4 Lawson's vendor characteristics also make its successful expansion into the relevant markets
5 unlikely. Lawson's annual research and development expenses are far less than SAP's, Oracle's, or
6 PeopleSoft's. Oracle recognizes that

7
8 .²⁹ SAP's internal business documents recognize

9
10
11 .³⁰

12 AMS is another niche software vendor, with a narrow focus on government-specific financial
13 management functionality. AMS's products are typically purchased only by ,
14 and AMS does not

15
16 . Oracle's AMS witness, Ms. Morea, will testify at trial that the functionality for public
17 sector organizations is substantially different than private sector functionality, and that

18 . In addition, Ms.
19 Morea will confirm that AMS has no plans to

20 . Finally, Ms. Morea will
21 testify that AMS has made

22 **B. Changing the Subject: the Technology Stack**

23 Oracle urges the Court to focus on anything but the markets and the harm the Plaintiffs have
24 charged in the Complaint. As best we can understand their experts' reports, Oracle claims that the
25 "real" competition is for the technology stack, and, besides, the integration layer of the stack will change

26
27 ²⁸ Ellison CID Dep. at 219:9-10 (referencing ORCL-EDOC-00144396 - 409 "
28 .").

²⁹ Ellison CID Dep. at 236:11-12; 237:13-20.

³⁰ , SAP01186-01197 at 01191.

1 in such a way as to make the applications market different, sometime in the future.

2 To rebut the presumption of anticompetitive effects, Oracle must come forward with evidence,
3 not arguments. *See, e.g., Baker Hughes*, 908 F.2d at 982 (after government establishes presumption
4 that the transaction will substantially lessen competition, the burden of producing evidence to rebut this
5 presumption then shifts to the defendant). Professor Teece believes

6 , but this is not evidence of how the harm in the
7 markets, as alleged, will be undermined. Professor Teece all but concedes this when he claims that the
8 acquisition will

9 . While antitrust law no longer condemns
10 bigness for its own sake, neither does it cite it as a reason to permit anticompetitive acquisitions.

11 Perhaps Professor Teece is best understood as saying that unless one understands how a
12 product competitively interacts with all of its complements, it cannot be a proper antitrust market. That
13 argument fails as a matter of law. In *United States v. Microsoft*, 253 F.3d 34, 52-54 (D.C. Cir.
14 2001), the D.C. Circuit upheld the market for operating systems, which are sold to consumers bundled
15 with its compliments. The court held that operating systems had no short-term substitutes that
16 consumers were willing to use, and therefore met the legal test for a product market. *Id.* The same is
17 true here. Market definition has a set legal meaning, which the courts routinely apply to software and
18 other high-tech markets, despite criticisms that such industries are too dynamic and fast moving to
19 understand.

20 Mr. Kutnick's argument about the "integration layer" is similarly flawed. Mr. Kutnick argues
21 that changes he perceives in the integration layer will, at some unspecified point in the future, make
22 gluing together "best of breed" applications a more attractive proposition than it is today.³¹ Against that
23 argument the Court must weigh the evidence from Mr. Ellison. According to Mr. Ellison's testimony,
24

25 ³¹ Best-of-breed is "an industry term, meaning that [customers] go out and find individual
26 vendors who offer the best marketing package, the best sales package, the best service package, the
27 best financial package, the best H.R. package, the best payroll package, you find the best suppliers and
28 you buy from the best suppliers, ignoring the integration issues, you just get the best parts." Ellison CID
Dep. at 133-34. These discrete "parts" are not designed to work together, and each application
operates on its own database. Therefore, companies that purchase best-of-breed software must
connect, or "integrate," the parts to permit them to communicate with each other and form a working
system. *See* Ellison CID Dep. at 131-139.

1 the best of breed approach is fundamentally flawed. The best of breed approach is “

2 ³² than an integrated suite, “

3
4 ³³ Under *Baker Hughes*, Mr. Kutnick must offer evidence, not mere argument and
5 opinion on where he thinks the market is heading. Mr. Ellison has already provided the evidence that
6 undercuts the theory, and, accordingly, the defense should carry no weight.

7 **C. Some Customers do not Demand High-function Products**

8 Oracle will present the testimony of an official from Emerson Electric, and perhaps some other
9 customers who do not demand high-function products. Emerson’s business is organized like a

10
11
12 in other words, Emerson does not demand the functionality that is the core of the product
13 markets alleged by the Plaintiffs. Even Oracle’s Chairman and CFO recognizes that

14
15
16
17 ³⁴

18 The relevance of Emerson Electric’s testimony is obscure. Customers who do not demand the
19 product do not inform an understanding of the competitive realities of the marketplace. Perhaps Oracle
20 means to argue that Emerson’s size and complexity make it a good sales opportunity for a suite of EAS
21 products, and the fact that Emerson has not embraced Oracle’s technology with unlimited zeal should
22 prove that no one really needs high-function products. Emerson’s software choice does not constrain
23 the price of any other customer’s high-function software procurement because of the price
24 discrimination mechanism. Emerson’s particular IT configuration is of no moment, and should be given
25 no weight by this Court.

26 **VIII. The Defendant’s Alleged Efficiencies Do Not Cure the Competitive Harm**

27
28 ³² Ellison CID Dep. at 136.

³³ *Id.* at 138.

³⁴ Henley Dep. 240:13-18.

1 Oracle's innovation claims are equally unverifiable speculation. The only Oracle innovation claim
2 that goes beyond a generalization is that there are purportedly certain specific PeopleSoft product
3 features that the transaction will enable Oracle to replicate for its own software. However, Oracle has
4 not specifically estimated _____, or determined the
5 resources required to build each feature, with or without acquiring PeopleSoft.³⁶

6 The transaction's hostile nature does not excuse Oracle from presenting verifiable efficiency
7 claims. The law does not lower the bar for efficiency claims for non-friendly transactions that
8 substantially reduce competition, as this one will. Moreover, the trial record will reflect that Oracle has
9 not seriously attempted to use its formidable in-house business and outside expert resources to
10 document the purported facts and methods used to make its efficiency claims.

11 **B. Alleged Efficiencies Attributable to Reductions in Output are not Cognizable**

12 Oracle's efficiency claims also are not cognizable because their core is apparently tied to
13 reduced output and consumer choice. Cost savings from anticompetitive reductions in output or services
14 do not count as efficiencies. *See Rockford Mem'l*, 717 F. Supp. at 1290 (rejecting some headcount
15 reductions as efficiencies because "savings in these areas would occur . . . from a drop in production");
16 *Guidelines* at § 4 ("merger-specific efficiencies . . . do not arise from anticompetitive reductions in
17 output or service").³⁷ Simply put, saving money by reducing quantity and quality is not a cognizable
18 efficiency under the antitrust laws.

19 Oracle's July spreadsheet strongly suggests that _____ . Roughly
20 percent of Oracle's purported cost savings are from reductions in sales and marketing and research
21 and development. If achievable at all, these reductions appear largely tied to Oracle's halt to the active
22 marketing, promoting and selling of PeopleSoft's software. For example, the number of projected
23 PeopleSoft and J.D. Edwards customers served by Oracle _____ by fiscal year 2008, from
24 _____

25 ³⁶ *E.g.*, Wohl dep, 485:2-9. ("

26 _____"); Catz Dep., 108:9-14, 109:9 - 111:11.

27 ³⁷ *See also* 4A Areeda, ¶ 974b3, at 64 (reduction in personnel should not be considered an
28 efficiency when a firm is simply "reducing its output"); William J. Kolasky & Andrew R. Dick, *The
Merger Guidelines and the Integration of Efficiencies Into Antitrust Review of Horizontal
Mergers*, 71 Antitrust L.J. 207, 228 (2003) ("reductions of output, for example, will normally be
accompanied by reductions in (total) costs, but this cost reduction is not an efficiency").

1 to . Licenses of PeopleSoft and J.D. Edwards software to new customers .

2 The alleged planned cuts also will reduce consumer choice. One of Oracle's central purported
3 justifications for the deal is to incorporate features of PeopleSoft's software that are not currently in
4 Oracle's products.³⁸ However, when these features will reemerge in Oracle's software is entirely
5 speculative. Nor has Oracle apparently seriously determined the resources needed to support
6 PeopleSoft's existing customers. Oracle's Executive Vice President of Applications Development
7 alluded to these realities when testifying about an *April 2004* conversation with Larry Ellison:
8
9
10
11

12 .³⁹

13 **C. Defendant's Alleged Efficiencies do not Account for the Transaction's**
14 **Integration Costs and are not all Merger Specific**

15 Oracle's efficiency claims contain at least two other core flaws. First, Oracle does not subtract
16 the substantial integration costs associated with merging the two companies from its \$
17 assertion. "Cognizable efficiencies are assessed net of costs produced by the merger or incurred in
18 achieving those efficiencies." *Guidelines* § 4. The July spreadsheet predicts \$ in merger
19 expenses, more than

20 is notable because, as Oracle's co-President Catz testified,
21

22 .⁴⁰

23 Second, not all of the cost savings, even as alleged by Oracle, are specific to Oracle's
24 acquisition of PeopleSoft. *See Heinz*, 246 F.3d at 722 (there must be efficiencies "that cannot be
25 achieved by either company alone because, if they can, the merger's asserted benefits can be achieved
26 without the concomitant loss of a competitor"). Oracle's \$ amount includes potential
27

28 ³⁸ Oracle's Response to the United States' Interrogatory 2.

³⁹ Wohl Dep., 494: 4-15 (emphasis added).

⁴⁰ Catz Dep., 413:14 - 415:16.

1 synergies attributable to PeopleSoft's July 2003 acquisition of J.D. Edwards.⁴¹

2 **IX. The Plaintiff States Have Met Their Standing Requirements**

3 The Plaintiff States brought this action under Section 16 of the Clayton Act, which authorizes
4 them to seek injunctive relief against threatened loss or damage arising from the proposed acquisition.
5 15 U.S.C. §§ 18, 26; *see Georgia v. Pennsylvania R.R. Co.*, 324 U.S. 439, 447 (1945). The
6 threatened loss or damage from the proposed acquisition gives rise to the Plaintiff States having standing
7 under two different capacities: (1) as *parens patriae* on behalf their citizens and each states' general
8 welfare and economies and (2) as representatives of government agencies that are past purchasers or
9 likely future purchasers of high-function HRM and FMS software. *See Hawaii v. Standard Oil Co.*,
10 405 U.S. 251, 259-61 (1972).

11 With regard to Plaintiff States' standing as *parens patriae*, proof of a probable substantial
12 lessening of competition will establish the threatened loss or damage to the general welfare and economy
13 of each plaintiff state in which the relevant competition takes place. In its Answer, Oracle admitted that
14 it markets and sells its products throughout the United States and in each of the Plaintiff States. Oracle's
15 Answer - Allegation 4. Oracle also admitted that its sales "represent a regular, continuous and
16 substantial flow of interstate commerce, and have had a substantial effect upon interstate commerce"
17 with and in each of the Plaintiff States. *Id.* At trial, Plaintiffs will offer evidence that both commercial
18 and public sector customers spend a substantial amount of money every year on high-function HRM and
19 FMS software.

20 The Plaintiff States also have standing as representatives of governmental entities in their
21 proprietary capacities. The governmental entities represented include state departments, bureaus,
22 agencies, and political subdivisions that have purchased or are likely future purchasers of high-function
23 HRM and FMS software. *Georgia v. Pennsylvania R.R. Co.*, 324 U.S. at 447. To establish antitrust
24 injury as private plaintiffs, the Plaintiff States must prove that the injury is "of the type the antitrust laws
25 were designed to prevent and that flows from that which makes defendants' acts unlawful." *Cargill,*
26 *Inc. v. Montford of Colo., Inc.*, 479 U.S. 104, 114 (1986) (quoting *Brunswick Corp. v. Pueblo*
27 *Bowl-O-Mat, Inc.*, 429 U.S. 477, 489 (1977)). Oracle admitted that it either sells, licenses, or markets
28

⁴¹In addition, Oracle cannot demonstrate that any efficiencies associated with the transaction will offset its substantial anticompetitive effects.

1 HRM or FMS software within each of the Plaintiff States. Oracle's Answer - Allegation 4; Defendant's
2 Response to Plaintiff's First Set of Requests for Admissions. In all ten Plaintiff States, there are current
3 or likely future public sector purchasers of high-function HRM and FMS software. At trial,
4 representatives from state and local entities will be called as witnesses at trial as examples of public
5 sector customers in the relevant market. In addition, there will be exhibits offered at trial, in the form of
6 discount approval forms and requests for proposals that prove state and local entities are customers in
7 the relevant market and would be harmed by a reduction in competition among the three high-function
8 HRM and FMS software vendors. Accordingly, Plaintiff States will establish antitrust injury to their
9 proprietary interests and will be entitled to injunctive relief.

10 **X. Conclusion**

11 For the reasons stated above, the Court should permanently enjoin Oracle's proposed
12 acquisition of PeopleSoft, and enter judgment for the Plaintiffs.
